

SUMMER INTERNSHIP IN WEB DESIGNING

Presented By
B. Kamalleswari - 951323104026
B.E. Computer Science and Engineering
JACSICE.

1

Introduction

Web designing is the process of creating the visual appearance and layout of a website. It involves organizing content, selecting appropriate colours, fonts, images, and designing user-friendly web pages. The main objective of web designing is to develop attractive, responsive, and easy-to-use websites. During my 30-day internship, I learned the fundamentals of HTML, CSS, JavaScript, and Bootstrap. I also gained hands-on experience in developing responsive websites and enhanced my technical, creative, and problem-solving skills.

2

Technologies Used

Frontend Technologies

- HTML
- CSS
- JavaScript
- Bootstrap

Development Tools

- Visual Studio Code
- Google Chrome

3

HTML

Definition

- **HTML** is the standard markup language used to create the structure and content of web pages.

Key Features

- Creates the structure of web pages.
- Uses tags and elements.
- Supports text, images, links, tables, and forms.
- Easy to learn and widely used.

Topics Learned

- HTML Elements & Tags
- Headings & Paragraphs
- Links & Images
- Tables & Forms
- Attributes & Lists

4

CSS

Definition

- **CSS** is a style sheet language used to design and enhance the appearance of web pages by applying colors, fonts, layouts, spacing, and animations.

Key Features

- Styles and designs web pages.
- Controls colors, fonts, and layouts.
- Creates responsive and attractive user interfaces.
- Improves the overall user experience.

Topics Learned

- Colors & Backgrounds
- Google Fonts & Text Styling
- Box Model
- Flexbox
- Animations & Transitions

5

Bootstrap

Definition

- **Bootstrap** is a popular front-end framework used to create responsive, mobile-friendly, and modern websites quickly.

Key Features

- Responsive and mobile-friendly design.
- Provides a flexible grid system.
- Includes pre-built UI components.

Topics Learned

- Bootstrap Grid System
- Containers & Rows
- Buttons & Cards
- Navbar
- Carousel
- Forms
- Responsive Layout

6

JavaScript

Definition

- **JavaScript** is a scripting language used to add interactivity and dynamic functionality to web pages.

Key Features

- Adds interactivity to web pages.
- Handles user events and actions.
- Supports dynamic content updates.
- Works seamlessly with HTML and CSS.

Topics Learned

- Variables & Data Types
- Operators
- Functions
- Conditional Statements
- Loops
- Form Validation

7

Project 1- Aurevia Event Management Website

Objective

To develop a responsive event management website that provides users with information about events and services through a simple and user-friendly interface.

Project Overview

During my internship, I worked on two projects: **Aurevia – Event Management Website** and **Zentora – Travel and Tourism Website**.

Aurevia: Used HTML and CSS to design the website layout, navigation bar, hero section, event details, services, gallery, and contact sections with an attractive user-friendly interface.

Zentora: Used Bootstrap to create responsive sections such as destination highlights, tour packages, services, and booking-related sections with a mobile-friendly design.

These projects helped me gain practical experience in web designing, responsive layouts, UI design principles, and front-end development techniques.

18

Learning Outcomes

- Gained practical knowledge in **HTML, CSS, JavaScript and Bootstrap**.
- Learned to design responsive and user-friendly web pages.
- Improved understanding of website structure and layout design.
- Enhanced problem-solving and debugging skills.
- Developed better knowledge of frontend development practices.

19

Conclusion

- The internship provided practical experience in **web designing and frontend development**.
- Successfully developed responsive websites using **HTML, CSS, Bootstrap and JavaScript**.
- Improved technical skills and gained confidence in creating web applications.
- This experience helped to understand the real-world web development process.
